## Abstract

A simple guide for using the IFColog class file.

## 1 About the class file

1. The default paper size is 7 by 10 inches. With a print area of 140 by 210 millimetres.
2. The base font is Computer Modern, 10pt, and the sans-serif font is Helvetica.
3. The reference list is condensed. The default bibliography style is `plain`.
4. To insert images, pdfs etc, use the `graphicx` package and for good printing quality should be at least 300dpi.
5. The style has no page-numbers, these are added to the bottom of the page when papers are collected into a single volume.
6. Figures are surrounded by a box.

---

Thank the referees (or not) using `\titlethanks{text}` in the preamble (or `\titlethanks{}`). Use `\thanks{text}` after the author name in the `\addauthor` command for specific acknowledgements.

## 2 Preamble

The front matter of an article is slightly different from others. Authors are added by a series of `\addauthor` commands, in addition to the `\titlerunning` and `\authorrunning` commands, see Figure 1.

The message reminding authors to thank the referees can be removed by using, in the preamble, the `\titlethanks` command followed by a message thanking the referees. To have no message at all use `\titlethanks{}`.

## 3 Section headings and capitalisation

Section and paragraph headings are invoked via the standard commands, such as `\section`, `\subsection`, `\subsubsection`, and Paper titles should follow the style commonly referred to as ‘Title Case’ for headings:

- Capitalise the first word in a title, regardless of part of speech.
- Capitalise all nouns, pronouns, verbs, adjectives, adverbs.
